

Pack it - FAST, FRESH and almost ANYWHERE....

Discovery Packaging Inc. is pleased to announce that Rapid Close® Self-Seal packaging is now available to the Produce packaging industry. Rapid Close® does not require twist ties, heat sealers, tape, locks or wire. The innovative adhesive based closure mechanism is built right into the mouth of the bag.

Your staff can easily pack up to 12 bags per minute / person, virtually in any location - in the field, packaging shed or processing plant. No compressed air, electricity or mechanical equipment is required. The act of placing the object being packaged into the bag, initiates the sealing process - a truly new way to close a package is now available using a permanent or re-closeable seal.

Rapid Close® Bags can be made from a variety of film gauges using high clarity OPP / PE films as well as EPI compostable films. Bags can be micro perforated and are also available Flexo printed (process and line) up to 8 colors. They are easy to use in groupings of 100 bags using - wickets, cable ties, card packs or as single bags.

Rapid Close® offers a cost competitive alternative to long lead time imports; they are made in North America under ISO 9001: 2000 Quality Control using FDA food compliant materials.
